| Service | Development of HSE Management system in line with OSHAD SF and ISO 45001 |
| Project Days | 20 |

CLIENT PROBLEM ?

The client had an existing HSE management system in place from a previous engagement with another consultancy who had developed a system, then audited their own system and got this accredited to an international standard. This system would not stand up to external scrutiny from client audits.

Many tenders now have ISO 45001 as a mandatory requirement. An HSE system was developed by the Corporate OHS Consultant which would stand up to scrutiny from their client audit teams, satisfy tendering requirements and demonstrate to any current or potential clients that the client were operating in a legally compliant manner as regards to the management of health and safety.

Any company engaging contractors has health and safety responsibilities, in regards to the management of these contractors and also towards anyone else that could be affected by their activities. The client needed processes and procedures put into place to control their contractors on site. Poor management of contractors can lead to injuries, ill health, significant additional costs and delays to projects.

Corporate OHS offers HSE and risk management solutions, including outsourcing.

Our Solution

The Consultant took care to fully understand the organisation and the context with regards to health and safety.

To ensure that the client was able to participate in large scale and public tenders the Consultant developed further their existing HSE management system to take it to a level that, after implementation, could be successfully accredited to the international ISO 45001 Health and Safety Management system standard.

A health and safety legal risk register was developed which identified all client activities as well as relevant best practice and international standards relating to the industry.

The Consultant introduced contractor management procedures to enable the client to reduce the risks to their own employees and the contractors themselves and also mitigate the risk that they presented to the successful on time on budget completion of projects.

Summary of Outputs

The Consultant developed the corporate documentation framework for an Occupational Health and Safety Management system that both conformed to Occupational Health Safety Abu Dhabi (OSHAD) requirements and was also based on the internationally recognised ISO 45001 Health and Safety Management System standard.

The system development focused on the below keys areas to ensure compliance with UAE Federal and Local HSE legal requirements;

- Creation of a Legal Risk Register covering all requirements for their operations in the UAE
- Creation of specific activity risk assessments
- Creation of mandatory registers and associated reporting forms
- Creation of induction, orientation and training material relating to the HSE Management system
- Ensured compliance with UAE HSE requirements and was structured to incorporate this into the clients day to day operations and activities
- Ensured that hazard identification and assessment had been adequately covered
- Worked with the clients top management to ensure that the legal requirements for health and safety were correctly discharged within organisational roles and responsibilities
- Ensured that emergency preparedness and response were planned for
